1. Statement			
Novelty (N)	Claims	1-26	YES
	Claims		NO
Inventive step (IS)	Claims	1-26	YES
	Claims		NO
Industrial applicability (IA)	Claims	1-26	YES

2. Citations and explanations (Rule 70.7)			
1. Reference is made to the following document:			
D1: US-B1-6 228 465 (SHIROYAMA TAISUKE ET AL)			
8 May 2001 (2001-05-08).			
2. INDEPENDENT CLAIM 1			
Document D1, which is considered to be the prior art closest to the subject matter of claim 1, describes (column 3, lines 9-64; figures 5A-5F):			
<i>"a method for etching a surface of a composite printed circuit board, wherein:</i>			
<ul style="list-style-type: none"><i>a laminate strip is produced, which laminate strip consists of at least one stack of a conductive metal pattern and a dielectric film; and</i><i>at least one part is cut out of said dielectric film using a method comprising at least one sandblast etching step."</i>			
It follows that the subject matter of the claim

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

differs from this known method, particularly in that:

*The claimed method is a method for producing parts for passive electronic components, wherein a **thin, fragile** metal strip is used (instead of a conductive metal pattern) and said part is cut out of said laminate strip (instead of the dielectric film only).*

As a result, the subject matter of claim 1 is novel (PCT Article 33(2)).

The problem that the present invention is intended to solve can therefore be considered to be that of *producing parts for passive electronic components using fragile, brittle materials* (see the present specification on page 3, lines 10-14).

The solution to this problem, as proposed in claim 1 of the present application, is considered to involve an inventive step (PCT Article 33(3)) for the following reasons:

The drawbacks of nanocrystalline materials, namely their fragility and the resulting handling problems, are, in fact, advantageous in a method that uses at least one sandblast etching step to make a cut in a laminate strip containing fragile nanocrystalline layers.

3.	<p>DEPENDENT CLAIMS 2-26</p> <p>Claims 2-26 are dependent on claim 1 and, as such, therefore also fulfil the PCT requirements of novelty and inventive step.</p>
4.	<p>The subject matter of the application relates to a method for producing parts for passive electronic components and is thus industrially applicable.</p>
